

# Securing Medical Data in Compliance with UAE Health Data Law

**LEGAL  
GRIDLOCK**

Specialized in data protection for  
high-confidentiality environments.

Enterprise-Grade Cybersecurity & DLP  
Solutions with Microsoft 365.

## Your Data is Your Most Valuable Asset and Your Biggest Risk.

- **Targeted Attacks:** Organizations holding sensitive data are high-value targets for cybercriminals seeking leverage or financial gain.
- **Insider Threats:** Risk of intentional or accidental data leakage by employees.
- **Remote Work:** Hybrid work models have significantly increased the risk of data exposure outside the office.
- **Impact:** A single breach can damage reputation, client trust, and operational continuity.
- **Regulatory Mandate:** UAE Federal Law No. 2 of 2019 (Health Data Law) mandates localization, protection, and controlled access of all health information.

## Who We Are

We are a cybersecurity and compliance company specialized in protecting highly sensitive information for organizations that manage confidential and high-value data. We deliver end-to-end Microsoft 365 security solutions tailored to healthcare environments, ensuring confidentiality, integrity, and full regulatory compliance.

## Microsoft 365 Security & Compliance Specialization.

*The Value of Robust Security.*

- **Control:** Full oversight on who can access, share, or move your sensitive information.
- **Compliance Automation:** Compliance becomes a built-in automation rather than a manual burden.
- **Risk Reduction:** Drastically reduces human error (the #1 cause of healthcare data leaks) and prevents data exfiltration.
- **Trust:** Demonstrates a strong security posture to clients and corporate partners.
- **Multilingual support** (English/Arabic).
- Seamless integration with EMR/EHR solutions.

## Protection for Business Workflows

### 1. Data Loss Prevention (DLP):

Prevents unauthorized sharing of contracts, financial records, and emails. Automated alerts for risky actions tailored to your business needs. Ensures health data stays inside UAE boundaries. Controls who can access, share, or move medical information.

### 2. Compliance Automation and Sensitivity Labels:

Classifies medical data automatically. Applies encryption and access restrictions to help demonstrate regulatory compliance instantly.

### 3. Endpoint Security:

Real-time protection across all hospital devices (clinical workstations, labs). Detects and isolates threats automatically. Provides visibility across laptops, phones, and remote work environments to prevent malware and compromised accounts.

## Our Implementation Framework

1. Assessment of Data Flows.

2. Policy Design for Use Cases.

3. Technical Configuration of DLP, Sensitivity Labels & Defender.

4. Staff Enablement (Doctors, Nurses, Admin).

5. Monitoring & Ongoing Support.

**Let's Strengthen Your Security.**
